

● APPLYING FOR: PRODUCT DESIGNER (B2B CONTRACT) — OX SECURITY

June 2026

Dear Hiring Team at Ox Security,

The intersection of AI-driven security, complex technical product, and the challenge of making deeply technical systems **intuitive for users** is exactly the kind of problem I want to be working on — and it maps directly to where my skills and experience sit.

I am a Senior UX/UI and Product Designer with **over two decades of experience**, currently serving as Jr. Product Owner at Astria Systems, where I lead UX/UI design across three active iGaming product portfolios. I own the design lifecycle end to end — from discovery and user research through to high-fidelity Figma prototypes, design system governance, and dev-ready handoff — while working in close collaboration with product managers and engineers in a **remote, fast-moving environment**.

What I think makes me a strong fit for Ox specifically is the combination of three things you are asking for together: **AI integration, design systems ownership, and the ability to translate genuinely complex technical challenges into clean, usable product experiences.**

On AI — I have been integrating **Claude AI into Figma-based workflows** at Astria Systems for prompt-driven UX copy, component specifications, micro-interaction scripting, and dev annotation. I also use Midjourney and DALL-E for rapid visual ideation and Figma AI for design system consistency checks. This is embedded in how I work daily — it directly compresses design cycles without reducing quality.

On design systems — I have built and maintained component libraries and brand UI systems across multiple live products simultaneously. I understand what it takes to create a system that **scales, stays coherent under pressure, and gets adopted by engineering teams** rather than ignored.

On complexity — iGaming is a domain where the interface must make split-second interactions feel effortless and getting the UX wrong has immediate, measurable consequences. Translating complex technical realities into experiences that feel obvious to the user is something I have been doing at production scale for six years. I see a **direct parallel in what Ox is building** — security products that handle genuinely sophisticated problems but need to be acted on quickly and confidently.

I hold a **Professional Diploma in UX Design from the UX Design Institute, Dublin (2023–2024)**, and bring front-end development skills in HTML5, CSS3, and JavaScript — giving me an unusually complete picture of the design-to-build process.

I am remote-ready, highly autonomous, and energised by products that matter. I would welcome the opportunity to show you my portfolio and talk through how my background maps to what you are building.

Warm regards,

Jonathan Edward Nestler
